# DTACT
### Purpose. Mission. Impact.

# BETTER DATA INTELLIGENCE
### Through faster and simpler data analytics

## BETTER DATA INTELLIGENCE

DTACT solves data problems and operates at the important intersection of big data, AI, national security, cybersecurity and neuro-diversity. We aggregate, clean and enrich large volumes of data as they flow in; always with a purpose and on a mission to create a positive impact.

From our national security experience, we know that there is no time to waste to stay ahead of data challenges and get results fast. We set out to look for the best, super-skilled talent and technologies to translate the hardest data problems and challenges into a simple solution – Raven. Raven is a fast, easy-to-use and multipurpose open standard data platform.

We bring our military and crime fighting expertise to organisations in the public and commercial sector. With a multinational team and offices in Singapore and the Netherlands, we leverage our super-skilled team to solve problems across Asia and Europe, and eventually across the world.

## FASTER & SIMPLER DATA ANALYTICS

The market need for smart Big Data processing strategies is currently hindered by the single solution dream, the buy vs build dilemma and the solution jungle.

Our agnostic solutions focus on providing an ideal ecosystem where existing tools can be easily integrated with what you already have, and data can be consolidated to perform the data analysis that gives you the insights when you need them, and when they matter most.

We remove complexity and bring simplicity so that you can focus on the important tasks - acting on insights and risk mitigation.

## DO WELL, DO GOOD

Since 2017, DTACT has worked with neuro-diverse colleagues on the autism spectrum. The neuro-diverse community has largely been ignored and have a much harder time finding a job.

With a global talent shortage in data analytics, we want to inspire others to follow our lead and focus on skills needed for data challenges by amazing people from both the neuro-typical and neuro-diverse talent pool.

Over the last two years, our super-skilled and dedicated team has developed a powerful open and a fast, easy-to-use and multipurpose data platform that has numerous applications across different industries and verticals.
